

How to make a Avro Vulcan Bomber

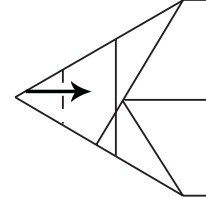

1. First make the centre crease; then the quarter-line crease at the top. Then fold the bottom left corner to meet the quarter line crease.

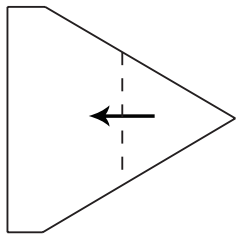

2. Fold the top left corner down over the sloping edge.

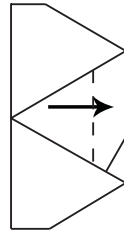

3. Make the centre crease by folding the left point to the right edge of the centre line and unfolding.

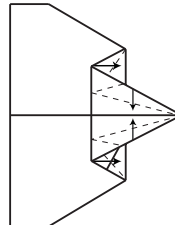

4. Fold the left point to the crease made in step 3. Then turn over.

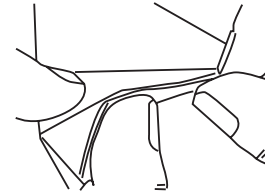

5. Fold the right point to the right edge.

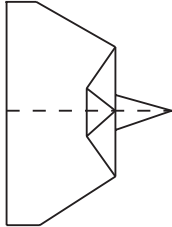

6. Take the tip of the triangular flap to the right, at the crease line shown.

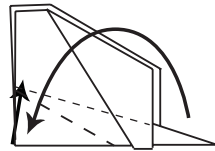

7. Now for a swivel fold, here's what to do...

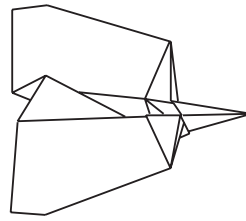

8. ...Take the top and bottom edges of the triangular flap to the centre crease in turn. The little valley folds at the side will neatly form themselves too.

9. Is your model looking like this? Now fold in half.

10. Form the wings by folding the flaps forward and back. Form the tail with a reverse fold.

11. Chocks away!
